

Welcome

Welcome to the Bigfork Valley Clinic and Hospital advanced wound care clinic.

Unfortunately, there has been a growing need for individuals like yourself in need of an advanced treatment plan to help you heal and prevent further wound care issues. We at Bigfork Valley would like to thank you for placing your trust in our wound care team.

Throughout your wound care treatment, our wound care specialist, care coordinator, and wound care team will develop an individualized plan for your overall needs. We will accomplish this goal by undergoing a detailed assessment, proper documentation to show progress, implement recommended dressing applications, order and complete necessary diagnostic testing, all while facilitating any necessary referrals and keeping your primary care provider updated on your healing.

Nutrition & Wound Healing

A healthy diet can promote wound healing.

Along with adequate water hydration, incorporating a well-balanced diet to promote wound healing and prevention include foods enriched with the following: protein, polyunsaturated fats, vitamin C, and zinc.
